The mhp3-encoded proteins may be used as immunogens to generate antibodies which immunospecifically bind such an immunogen. The antibodies generated against the antigen are useful in diagnostic immunoassays, passive immunotherapy and generation of anti-idiotypic antibodies. Mhp3 proteins may also be used in immunoassays, e.g. to detect or measure in a biological sample from a vaccinated or potentially infected test animal the presence of antibodies to the antigen, and thus to monitor the immune response and/or to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

                                                                                                                                                                                                                             The sequence represents Mycoplasma hyopneumoniae a recombinant MHP3 antigen lacking the first 28 amino acids (the putative signal sequence). MHP3 antigen and its fragments are useful in manufacturing a vaccine for treating or preventing a disease or disorder in an animal, especially pig, caused by M. hyopneumoniae infection e.g. enzootic mycoplasma pneumonia. The mhp3-encoded proteins may be used as immunogens to generate antibodies which immunospecifically bind such an immunogen. The antibodies generated against the antigen are useful in diagnostic immunoassays, passive immunotherapy and generation of anti-idiotypic antibodies. Mhp3 proteins may also be used in immunoassays, e.g. to detect or measure in a biological sample from a vaccinated or potentially infected test animal the presence of antibodies to the antigen, and thus to monitor the immune response and/or to diagnose

RAA's can be used for tumour immunotherapy and for producing and purifying antibodies which can be used for tumour diagnosis, localisation and therapy. The antibodies can also be used for the production of anti-idiotypic antibodies which can also be used in immunotherapy.

                                                                                                                                                    This sequence is a membrane protein designated M161Ag. Oligonucleotide probes for the cDNA were designed from putative N-terminal M161Ag pepti sequences isolated from P99 cells. M161Ag can be used in the developmen of a leukaemia treating agent.
                                                                                                                           Sequence

           AAY81501 to AAY81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. AAA05407 to AAA05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and individually antipens.
and/or antigens. The ni
diagnostic assays. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       can be useful in vaccines for inducing protective antibodies against pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein are used to detect corresponding antigens, to purify the protein are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes isolated from E. faecalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated Enterococcus faecalis polynucleotides - used products for the detection of Enterococcus and for use in for prevention or attenuation of Enterococcus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 1999-070095/06

                                                                                                                                                                                                                                                                                                                                                                         by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids products from the present invention can also be used for screening
                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused be used in vaccines for preventing or attenuating an infection caused be used in vaccines.
                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated Enterococcus faecalis polynucleotides - used products for the detection of Enterococcus and for use in for prevention or attenuation of Enterococcus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-MAY-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-NOV-1998.

                                                                                                                                                                                        This represents the Borrelia burgdorferi antigenic protein p39 beta. The antigenic protein p39 alpha is immunoreactive with mammalian Lyme borreliosis serum. The Borrelia antigenic proteins p39 alpha and p39 beta are used in vaccines to protect against Lyme disease, as assay reagents to detect specific antibodies in the serum (diagnostic of Lyme disease), and to raise antibodies, either for diagnosis (by detecting disease), and to raise antibodies, either for diagnosis (by detecting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
          The invention relates to a novel secreted autostimulatory factor, interleukin-X (II-X), from an Epstein Barr virus (EBV)-carrying lymphoblastoid cell line. IL-X proteins can be used to enhance the growth of cells in vitro, or to grow primary human B cell cultures to facilitate
                                                                                         New IL-x polypeptides useful e.g. for enhancing the growth of cells vitro, for growing primary human B cell cultures to facilitate proliferation of these cell lines, as therapeutics or prophylactics, molecular weight standards

Nucleotide sequences encoding the peptides could be used to produce recombinant peptides or they could be used as probes or primers for diagnostic and/or analytical polymerase chain reaction (PCR) procedures, or as DI or RNA sizing standards. The present sequence represents the amino ac sequence of IL-X.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc primer sequences given in AAQ34673-76. This DNA contained two open creading frames (ORF). It was therefore concluded that the 939 antigen children with has been previously described is not one protein but two, 39-alpha cand 39-beta. The P39 signal appears to be enhanced when both genes calculated molecular weight of 36.926 kD. The protein with a calculated molecular weight of 36.926 kD. The protein encoded by this canculated molecular weight of 36.926 kD. The protein encoded by this configure which is reactive with serum from human Lyme patients. The ORF concleotides downstream of p39-alpha and encodes a protein of 341 amino acids (37.506 kD). The promoter located 5' of p39-alpha appears to be present with classic -10 and -35 regions whereas p39-beta lacks a crecognisable promoter sequence. Both genes have putative ribosomal binding sites immediatly 5' to the start codons and each is terminated with a TAA codon. Comparing the gene sequences of p39-alpha and p39-alpha that these genes have 628 similarity.

C beta indicates that these genes have 628 similarity.

CC primer sequences given in AAQ34673-76. This DNA contained two open CC reading frames (ORF). It was therefore concluded that the P39 antigen CC which has been previously described is not one protein but two, 39-alpha CC and 39-beta. The P39 signal appears to be enhanced when both genes CC calculated molecular weight of 36.926 kD. The protein with a CC gene which is reactive with serum from human Lyme patients. The ORF CC of gene 2 has been designated p39-beta. This genes' ORF starts 116 CC nucleotides downstream of p39-alpha and encodes a protein of 341 amino CC acids (37.506 kD). The promoter located 5' of p39-alpha appears to be present with classic -10 and -35 regions whereas p39-beta lacks a CC recognisable promoter sequence. Both genes have putative ribosomal CC with a TAA codon. Comparing the gene sequences of p39-alpha and p39-alpha code indicates that these genes have 62% similarity.

CC (Note: Revised entry submitted to correct the patent number format of CC granted patent numbers. For further information please visit the Derwent valve.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
